# BACKWARD INCLINED FANS

BC-SW  
Arrangement 8

BC-DW  
Arrangement 3

Model BC-SW & BC-DW is available with UL/cUL 705 listing, for electrical, File No. E158680.

Twin City Fan & Blower certifies that the Model BC-DW fan shown herein is licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program.

Twin City Fan & Blower certifies that the Model BC-SW fan shown herein is licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program. See Twin City Fan & Blower Fan Selector® program for sound ratings.

## Models

**BC-SW | BC-DW**

The BC is a non-overloading centrifugal fan available in a SWSI (single width, single inlet) and DWDI (double width, double inlet) design. The BC is a popular choice for the efficient handling of large volumes of relatively clean air at low to moderate pressures in applications such as:

- HVAC (heating, ventilating and air conditioning)
- Combustion air supply
- Filtration and drying systems
- Fume hood, spray booth and other exhaust systems
- Air pollution control (clean side of dust collectors)
- Industrial processes

Please discuss your particular application with the Twin City Fan & Blower representative for your area.

### Model BC-SW

#### Sizes

12.25" to 98.25" wheel diameters

#### Performance

Airflow to 277,500 CFM  
Static pressure to 20" w.g.

#### Arrangements

Available in Arrangements 1, 3, 3F, 3SI, 4, 4S, 4VI, 4HI, 7SI, 8, 9, 9F, 9H, 9ST, 9SS, 10

### Model BC-DW

#### Sizes

12.25" to 89" wheel diameters

#### Performance

Airflow to 344,300 CFM  
Static pressure to 14" w.g.

#### Arrangements

Available in Arrangements 3, 3F, 3DI, 7DI

For complete product performance, drawings and available accessories, download our Fan Selector program at [tcf.com](http://tcf.com).

## Models

### BC-SW | BC-DW

#### Wheel Construction

BC wheels are constructed of steel using flat single thickness blades, solid welded to the rim and backplate.

A conical spun shroud (rim) makes BC fans less susceptible to the performance losses associated with poor inlet conditions. All BC wheels are statically and dynamically balanced to grade BV3 per AMCA 204 for smooth operation prior to being assembled in the fan, followed by final balance of the entire rotating assembly.

#### Housing Construction

All fan housings are continuously welded to provide strength and durability for extended service life.

All housings are reinforced with rigid bracing to increase structural integrity. Lifting lugs are standard on all fans. Precisely positioned cutoff plates and aerodynamically spun inlet cones provide high efficiency and smooth airflow through the fan. Inlet collars for slip-joint connections are standard on all SWSI fans. All SWSI fans and DWDI Class III and IV fans feature an outlet flange for duct connection as standard. DWDI Class I and II fan outlets are designed for slip-on joint connection. A flanged outlet is available as an option.

All fans are available in standard discharge configuration (see page 12). SWSI fans Class I and II, sizes 270 and smaller in Arrangements 1, 4, 9 and 10 are field rotatable to any standard discharge position. To help reduce overall heights, all DWDI fans feature a non-rotatable housing design as standard.

#### Shafts

Shafts are AISI Grade 1040 or 1045 hot-rolled steel accurately turned, ground, polished, and ring gauged for accuracy. Shafts are sized for a first critical speed of at least 1.43 times the maximum speed for the class.

#### Bearings

Bearings are heavy duty, grease lubricated, spherical roller or adapter mounted anti-friction ball, self-aligning, pillow block type, selected for minimum average bearing life (AFBMA L-50) in excess of 200,000 hours at the maximum class RPM.

#### Optional Construction:

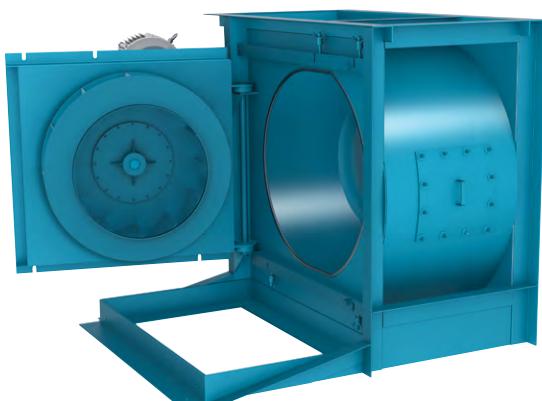

- Split Housings
- Swingout Construction
- High Temperature Construction (see page 11)

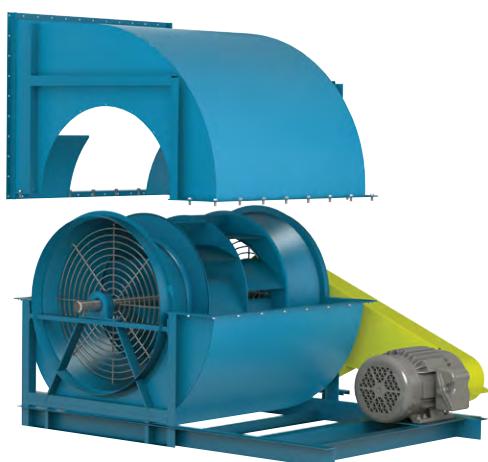

BC-SW Wheel

BC-DW Wheel

Swingout Construction  
(Available in Arrangements 4S, 9ST, 9SS)

Split Housings  
(Horizontal or Pie-Shaped)

## Arrangement 1

### SWSI — Single Width, Single Inlet

Arrangement 1 is usually belt driven. The wheel is overhung on the shaft, i.e., mounted at the end of the shaft. The motor can be mounted in any of the four AMCA standard motor positions, W, X, Y, or Z. The two fan bearings are mounted on the bearing pedestal, out of the airstream, which makes them ideal for high temperature or contaminated air applications. Belt driven configurations offer performance flexibility.

## Arrangement 3

### SWSI — Single Width, Single Inlet

Arrangement 3 is configured with the wheel mounted between the bearings making it structurally sound and compact. The arrangement 3 has one bearing located in the airstream. The motor can be mounted in any of the four AMCA standard motor positions, W, X, Y, or Z.

## Arrangement 3F

### SWSI — Single Width, Single Inlet

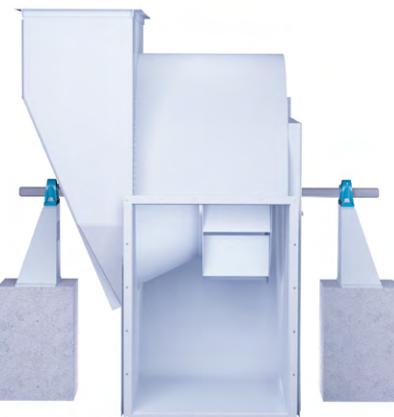

Arrangement 3F is an Arrangement 3 with extended angle frame to mount the motor and horizontal slide base as an assembly. Arrangement 3F is not suitable for mounting vibration isolators directly under the fan.

## Arrangement 3SI

### SWSI — Single Width, Single Inlet

Arrangement 3SI is direct drive. Like the Arrangement 3, the wheel is mounted between the bearings. The Arrangement 3SI utilizes an integrated inlet box to locate the bearing outside of the airstream on independent bearing pedestals which allows for elevated operating temperatures and relatively clean air. The Arrangement 3SI includes a pie split housing for easy wheel removal. The motor is located by the customer off the fan assembly and direct coupled to the shaft opposite of the inlet box side.

4VI

4HI

**Arrangement 4****SWSI — Single Width, Single Inlet**

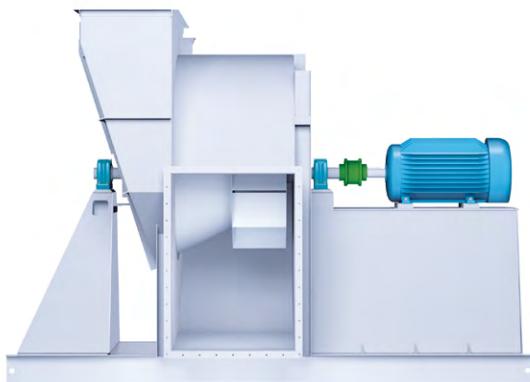

Arrangement 4 is a direct drive fan. The wheel is mounted directly to the motor shaft with the motor mounted to a pedestal. Arrangement 4 offers low maintenance since there are no fan bearings, fan shaft or drive parts to maintain. Arrangement 4 fans are typically limited up to size 365.

**Arrangements 4S (Swingout Construction)****SWSI — Single Width, Single Inlet**

Arrangement 4S is a modified Arrangement 4 fan intended for easy access to the wheel and housing interior. The motor and wheel assembly is mounted to reinforced framework to support the opened housing.

**Arrangements 4VI (Vertical) & 4HI (Horizontal)****SWSI — Single Width, Single Inlet**

Arrangement 4VI and 4HI are modified Arrangement 4 fans designed to mount directly on the inlet of the fan. The Arrangement 4VI and 4HI fans feature reinforced inlets and removable motor side to allow the rotating assemblies to be removed without removing the housing from the mounting structure. Arrangement 4VI fans utilize a vertical airflow into the fan (vertical motor shaft) and Arrangement 4HI fans employ horizontal airflow into the fan (horizontal motor shaft).

**Arrangement 7SI****SWSI — Single Width, Single Inlet**

Arrangement 7SI is direct drive. Like the Arrangement 3SI, the wheel is mounted between the bearings. The Arrangement 7SI includes an integrated inlet box to locate the bearing outside of the airstream. The pedestal is designed to accommodate the motor, flexible coupling and one bearing. A pie split housing is provided for easy wheel removal. The fan assembly is then mounted on a unitary base as standard. An inertia base is an available option.

## Arrangement 8

### SWSI — Single Width, Single Inlet

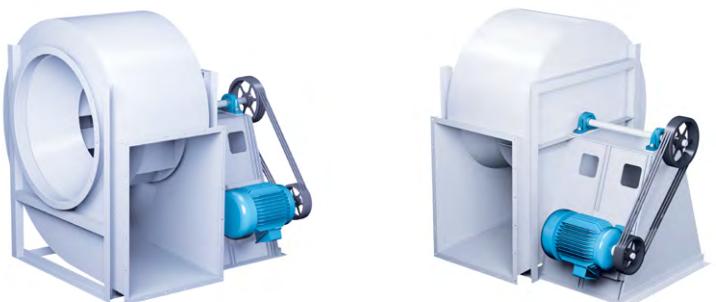

Arrangement 8 is a modified version of Arrangement 1 used for direct drive. The Arrangement 1 bearing pedestal is extended to accommodate the motor. A flexible coupling connects the fan and motor shaft.

## Arrangement 9

### SWSI — Single Width, Single Inlet

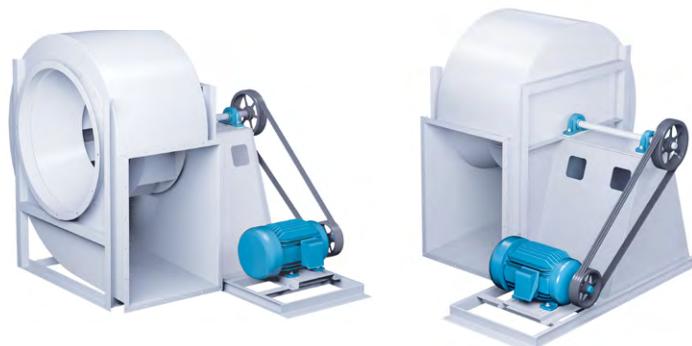

Arrangement 9 is available as belt driven only. A motor slide base is mounted on the side of the bearing pedestal. This arrangement permits the unit to ship as a complete assembly with the motor and drive mounted. Typically, the motor is mounted on the left side of the pedestal for CW rotation fans and on the right side for CCW rotation fans.

## Arrangement 9F

### SWSI — Single Width, Single Inlet

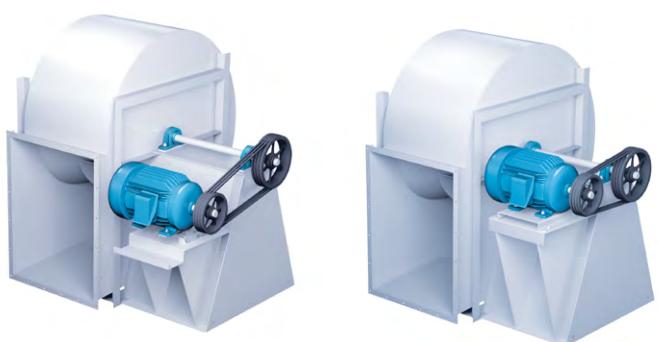

Arrangement 9F is available when an Arrangement 9 requires a motor which is too large to mount on the bearing pedestal. The fan frame is extended to accommodate the motor, for horizontal mounting, similar to an Arrangement 1 fan. Arrangement 9F is not suitable for mounting vibration isolators directly under the fan.

## Arrangement 9H

### SWSI — Single Width, Single Inlet

Arrangement 9H is available for motor mounting on the side of the bearing pedestal when horizontal motor adjustment is preferred. The pedestal is extended on one side to accommodate the motor for horizontal mounting. Typically, the motor is mounted on the left side of the pedestal for CW rotation fans and on the right side for CCW rotation fans.

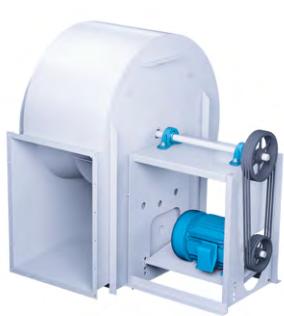

## Arrangement 9ST & 9SS (Swingout)

### SWSI — Single Width, Single Inlet

Arrangement 9ST and 9SS are modified Arrangement 9 fans intended for easy access to the wheel and housing interior. The motor and wheel assembly is mounted to reinforced framework to support the opened housing. Arrangement 9ST mounts the motor above the bearing pedestal. The Arrangement 9SS mounts the motor on the side of the bearing pedestal.

Transparency view for showing bearing location.

Sizes 122-365  
(Vent Sets)

Sizes 402+

**Arrangement 10****SWI — Single Width, Single Inlet**

Arrangement 10 is available as belt driven only. For Class I and II fans, sizes 122 through 365, Arrangement 10 units are commonly referred to as Ventilating Sets. (Refer to Catalog 600 for more details.) Arrangement 10 units have adjustable motor bases mounted inside the bearing pedestal. This arrangement offers a more compact design than the Arrangement 9 and is suitable for roof or outdoor installations when supplied with the optional weather cover.

**Arrangement 3****DWDI — Double Width, Double Inlet**

DWDI fans are generally supplied in Arr. 3 for V-belt drive. The wheel is mounted between the bearings and supported by the fan housing. Since both bearings are located in the airstream, standard DWDI fans should be used for clean air applications with air temperatures limited to 130°F. The motor can be mounted in any of the four standard motor positions: W, X, Y or Z.

**Arrangement 3DI****DWDI — Double Width, Double Inlet**

Arrangement 3DI is direct drive. Like the Arrangement 3, the wheel is mounted between the bearings. The Arrangement 3DI utilizes integrated inlet boxes to locate the bearings outside of the airstream on independent bearing pedestals which allows for elevated operating temperatures and relatively clean air. The Arrangement 3SI includes a pie split housing for easy wheel removal. The motor is located by the customer off the fan assembly and direct coupled to the shaft.

**Arrangement 3F****DWDI — Double Width, Double Inlet**

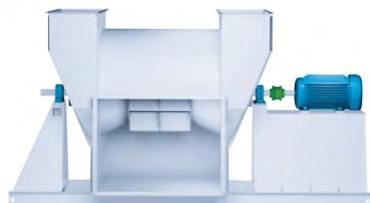

Arrangement 3F offers an integral extended base to accommodate the motor. The base is prepunched to accept vibration isolators. Arr. 3F is available to Size 660 and for motor positions W and Z as standard. For motor positions X and Y, consult factory.

Arr. 7

Arr. 7DI

**Arrangement 7 & 7DI****DWDI — Double Width, Double Inlet**

Arrangement 7 and 7DI are direct drive. Like the Arrangement 3 and 3DI, the wheel is mounted between the bearings, but the 7 and 7DI incorporate a pedestal designed to accommodate the motor, flexible coupling and one bearing. The Arrangement 7DI utilizes integrated inlet boxes to locate the bearings outside of the airstream allowing for elevated operating temperatures and relatively clean air. A pie split housing is provided for easy wheel removal. The Arrangement 7DI fan assembly is then mounted on a unitary base as standard. An inertia base is an available option.

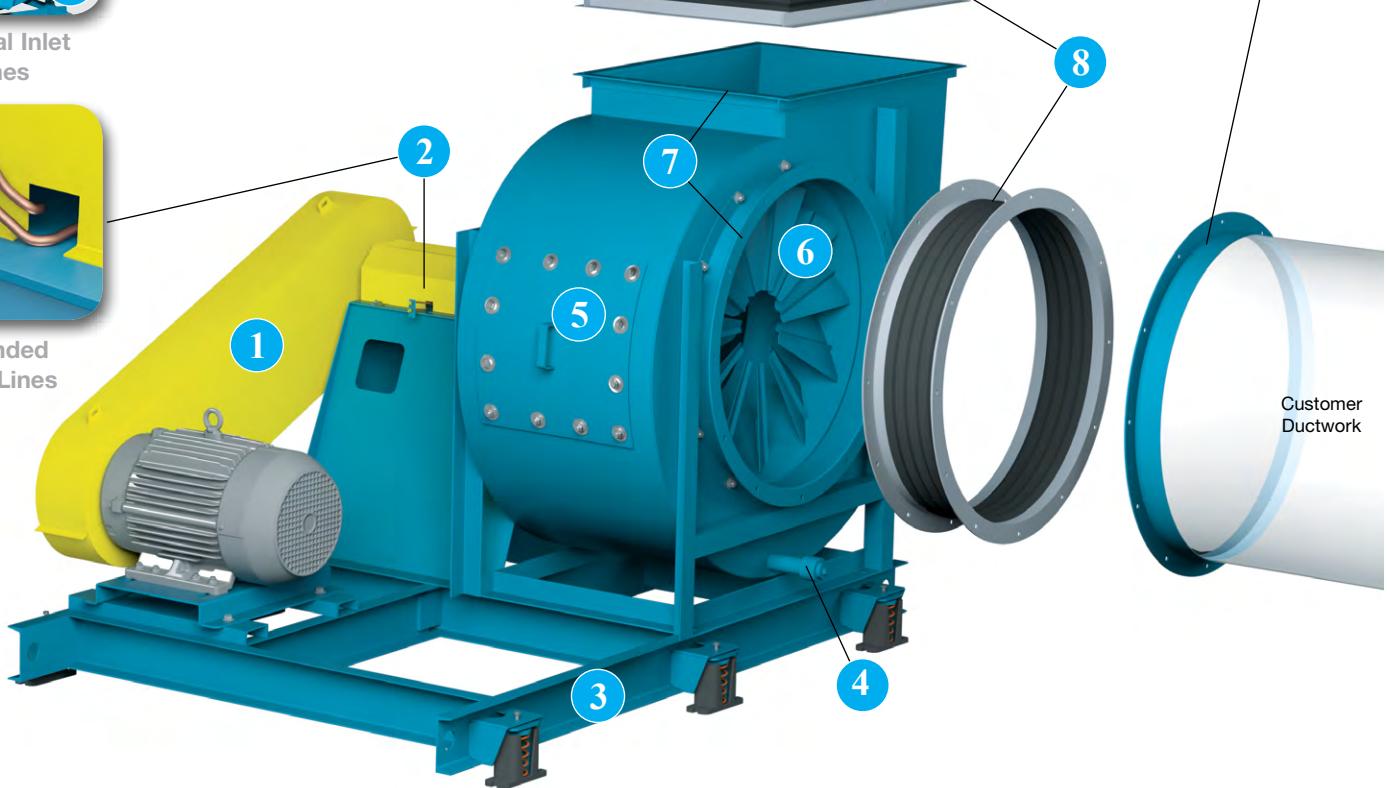

# OPTIONS/ACCESSORIES

External Inlet  
Vanes

Extended  
Lube Lines

**1 Belt Guard** Belt guard protects personnel from the moving drive parts. OSHA and quick access guards are available. Arrangement 10 offers a standard belt guard.

**2 Shaft Guard, Bearing Guard & Extended Lube Lines** Sheet metal guards cover shaft and bearings and come with extended lube lines to a common point outside of the guard. A guard spanning the shaft between the bearings is available to provide open access to bearings for lubrication and vibration monitoring.

**3 Vibration Isolation Bases** provide a common support to fan, motor and drive including guards and utilize heavy duty structural channel. Vibration isolation bases require spring or rubber-in-shear type isolators that are designed to limit forces transmitted to the support structure of an operating fan. Flexible connectors at inlet and outlet are also required (as shown).

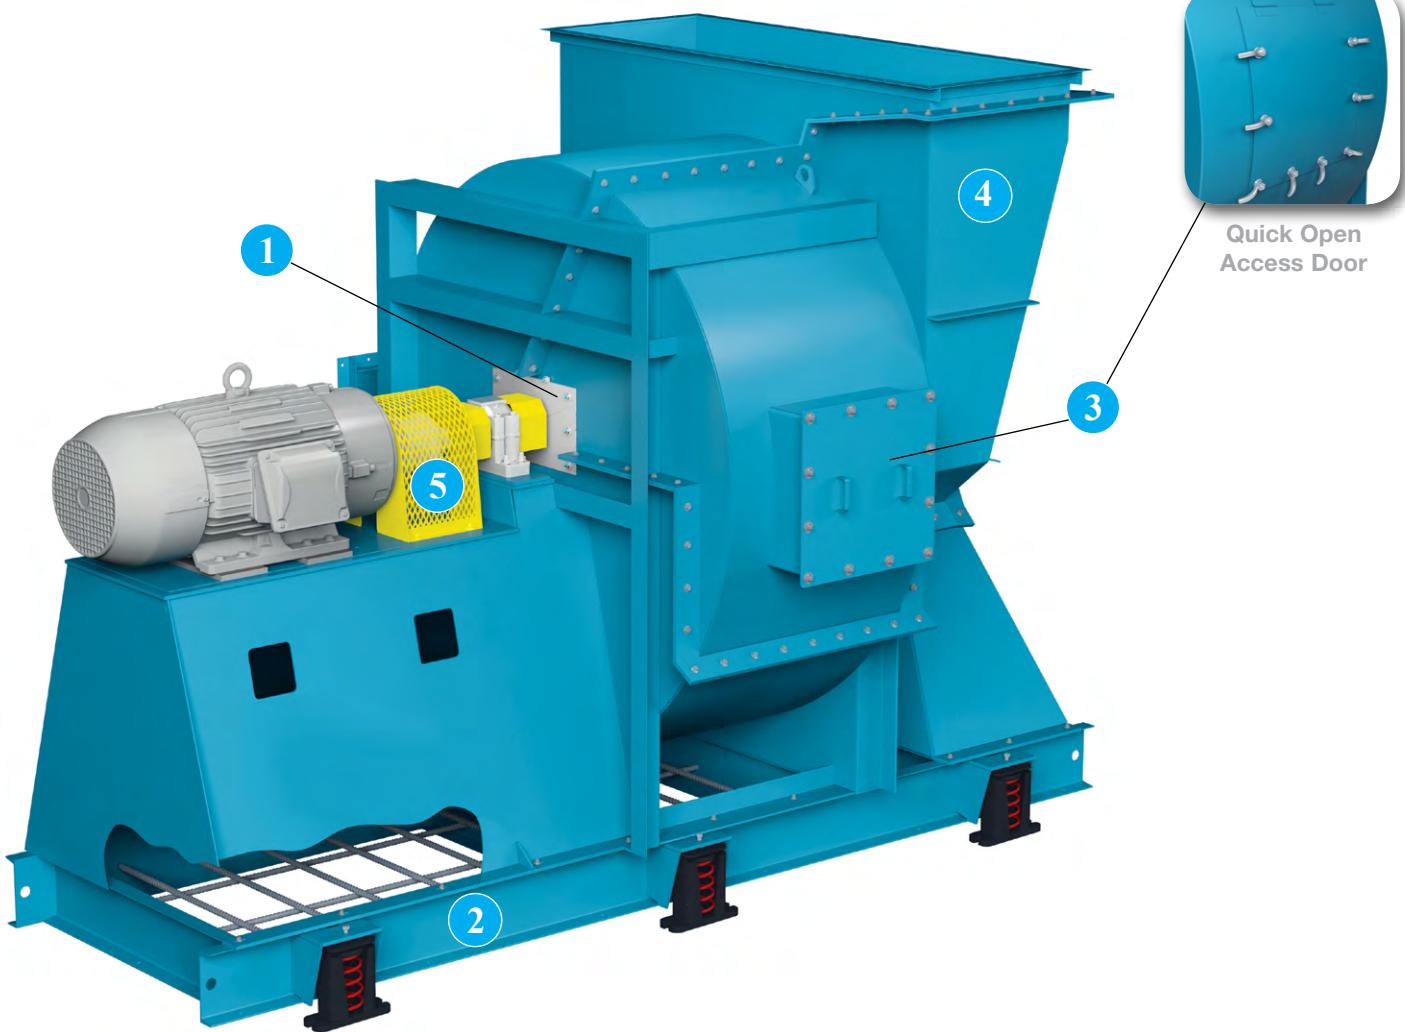

**4 Drain with Plug** Threaded pipe coupling welded to the lowest point in the housing scroll. All fans come with a weep hole in the bottom of the housing as standard.

**5 Bolted Access Doors** for wheel inspection and maintenance. See page 9 for raised & quick access doors.

**6 Nested & External Inlet Vanes** Variable inlet vanes cause the entering air to spin in the direction of wheel rotation, resulting in reduction in volume, static pressure and brake horsepower and thus providing an infinite number of fan curves approximately parallel to the original fan curve. Variable inlet vanes cost about 50% to 80% more than outlet dampers but offer significant savings in energy. Both types are available to 600°F construction.

**7 Flanged Inlets/Outlets** Punched inlet flanges are available for duct mounting (as shown). Punched or unpunched outlet flanges are welded to the fan outlet. Unpunched flanged outlet is standard on all SWSI and DWCI Class III and IV fans.

**8 Inlet/Outlet Companion Flanges & Flex Connectors (Round & Rectangular)** Companion flanges are commonly connected to a user's duct for easy installation of flexible connections between the fan and duct. Companion flanges and flex connectors are punched to match the fan's inlet or outlet punching.

**1** **Shaft Seals** reduce leakage and protect the bearings from a contaminated airstream. Standard seals are constructed of Tetrglas compressed between an aluminum cover plate and the fan housing. The standard shaft seal is not gas tight. Special seals are available for low leakage applications requiring more protection.

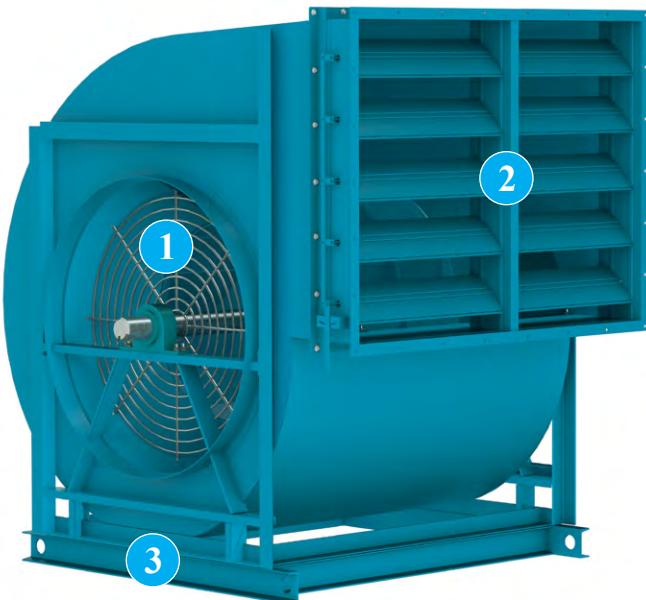

**2** **Inertia Bases** provide a common support to fan, motor and drive including guards and utilize heavy duty structural channel with spring isolators. Inertia bases incorporate reinforcing rods and require customer supplied concrete. Inertia bases are typically used on longer, direct drive fans to mitigate assembly deflection, maintaining proper alignment between the motor, coupling, shaft and bearings. Flexible connectors at inlet and outlet are required.

**3** **Raised Access or Quick Access Doors** for quick wheel inspection and maintenance.

**4** **Inlet Boxes** are designed to minimize pressure drop and are recommended for applications where uniform flow is difficult to obtain due to limited space. Inlet boxes can be designed to be either detachable or integral (shown above) to the fan.

**5** **Coupling Guards** are designed to cover the rotating shaft and drive components.

# OPTIONS/ACCESSORIES

**1 Inlet & Outlet Safety Screens** are available for mounting in the fan inlet or outlet in non-ducted applications.

**2 Outlet Dampers (Opposed or Parallel Blade)** Outlet dampers add resistance to the fan by shifting the operating point to the left of the rating point. The horsepower savings depends on the relative position on the fan curve and is usually much less than other methods. Outlet dampers are typically the least expensive option and should be considered when infrequent operation at lesser capacity is desired or when handling hot, humid or particulate laden air. **Parallel blade dampers** are recommended for systems where air volume is modulated between full-open to about 75% of open. **Opposed blade dampers** cost about 10% more and are recommended for systems where volume is modulated over the entire range. Opposed blades reduce air volume in a closer relationship to the control arm movement. Both types are available to 750°F construction.

**3 Unitary Base** utilize structural channel to support the fan assembly and are designed for use without isolators.

## OTHER OPTIONS/ACCESSORIES INCLUDE

**Variable Frequency Drive (VFD)** A VFD changes the fan speed for reduced volume operation and deliberate acceleration rates at start up. A VFD can provide the greatest potential for energy savings. A VFD should be considered for extended operation at part load conditions, especially below 70% of the full volume operation.

**V-Belt Drives** offer an economical yet flexible means of transmitting power to the fans. There are two types of V-belt drives. **Adjustable pitch** drives offer easy adjustment of speed. The motor pulley pitch can be adjusted when the fan is at rest offering speed variation of about 10% from the design speed. This style of sheave can result in higher vibration so adjustable pitch drives are not recommended for use on motors over 10 HP or wherever low vibration is required. **Fixed pitch or constant speed drives** offer low cost and the lowest vibration levels. Speed change can often be accomplished by changing only one of the sheaves.

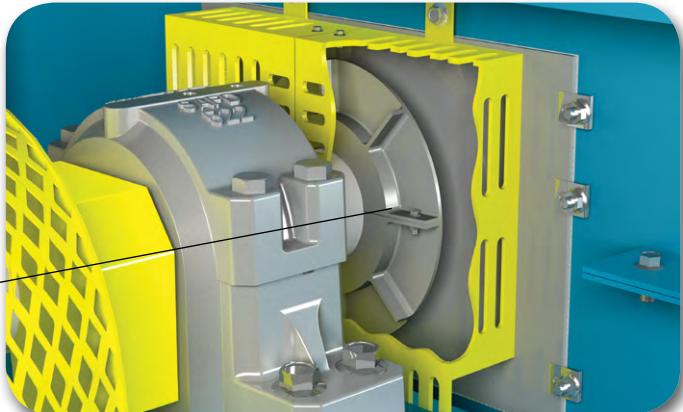

**Special Paint & Protective Coatings** are available for many applications. Refer to Engineering Supplement ES-35 (Protective Coatings Guide) for more details.

**Bearing Upgrades** to unit roller with non-split pillow block or spherical roller with split pillow block housings (bearing races not split) are available. Spherical roller bearings with split pillow block housings are not available for fans with less than 1-7/16" diameter bearings nor recommended for fans with lightly loaded bearings. Refer to Fan Engineering Data FE-1200 (Fan Bearing Selection) and FE-1300 (Fan Bearing Maintenance & Troubleshooting) for the correct type of bearings, selection criteria, maintenance, etc.

- **Bearing RTD (temperature sensors)**
- **Vibration sensors**
- **Piezometer ring airflow measuring system.** Refer to Twin City Fan Engineering Supplement ES-105 (Airflow Measuring System Using Piezometer Ring).
- **Steel Wall & Aluminum Clad Housings**
- **Insulation Pins**
- **Consult factory for other accessories**

## High Temperature Construction

Standard fan design options are available to handle airstream temperatures to 800°F. Consult your Twin City Fan & Blower representative for applications over 800°F. The fan bearings should be kept outside of the hot airstream and below 130°F ambient. High temperature operating limits, available arrangements, and necessary modifications are shown in Table 1.

### Shaft Cooler (Heat Slinger)

Cast aluminum shaft cooler dissipates the heat transferred to the shaft from the airstream protecting the fan bearings. Recommended for applications over 300°F.

Shaft Cooler & Safety Guard

Table 1. High Temperature Construction Requirements

TEMPERATURE (°F)	TYPE OF BEARING	LUBRICATION	OTHER REQUIREMENTS	AVAILABLE ARRANGEMENTS
-20°F to +300°F	Ball or Roller	Grease	Standard Fan	Arr. 1, 8, 9, 9F, 10 Arr. 3 and 3F to 130°F Arr. 4 to 180°F
300°F to 500°F	Ball or Roller with (1) Expansion Bearing	High Temp. Grease	Shaft Cooler, Shaft Seal. For Arr. 9 & 10 Fans, a Motor Heat Shield is Included.	Arr. 1, 8, 9, 9F, 10
500°F to 800°F	Ball or Roller with (1) Expansion Bearing	High Temp. Grease	High Temp. Aluminum Paint Shaft Cooler, Shaft Seal. For Arr. 9 & 10 Fans, a Motor Heat Shield is included.	Arr. 1, 8, 9, 9F, 10 (Arr. 9 & 10 Limited to 600°F

## Derating Factors For High Temperature

Fan operation at high temperature adversely affects the strength of fan wheels. As a result, the maximum safe speed must be derated by the factors shown in Table 2.

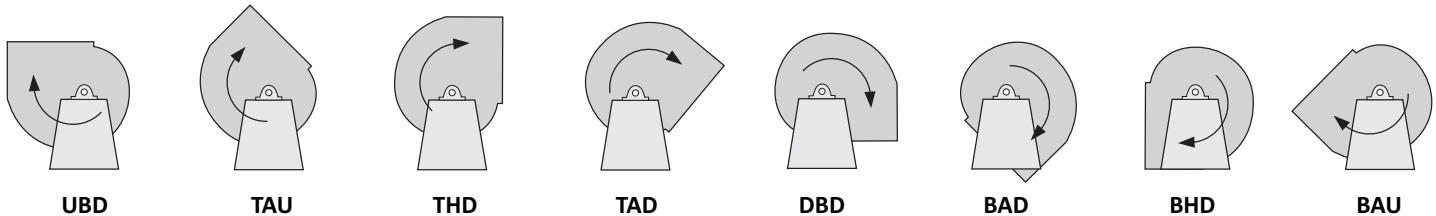

**Example:** Maximum safe speed at 600°F for a size 365 BC, SWSI, Class II steel wheel =  $0.86 \times 1283 = 1103$  RPM (1283 RPM is maximum RPM at 70°F).

Table 2. Derating Factors For High Temperature

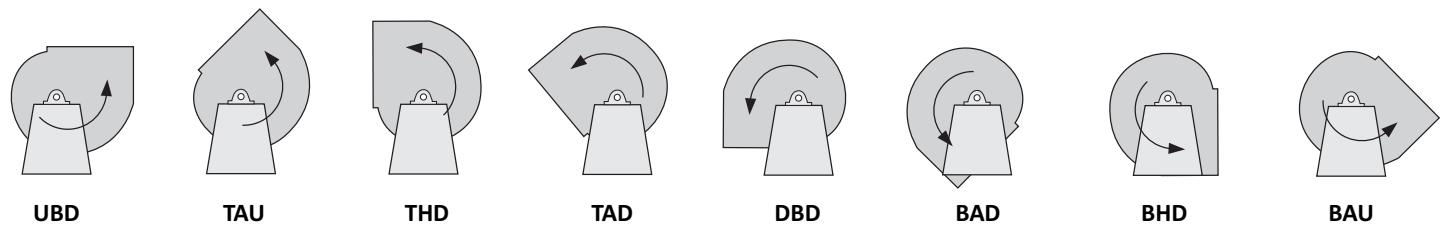

TEMPERATURE (°F)	STANDARD STEEL	STAINLESS STEEL
70	1.00	1.00
200	0.99	0.95
250	0.98	0.93
300	0.98	0.91
400	0.96	0.88
500	0.93	0.84
600	0.90	0.81
700	0.80	0.78
800	0.60	0.75
900	—	0.73
1000	—	0.70

## STANDARD CONFIGURATIONS

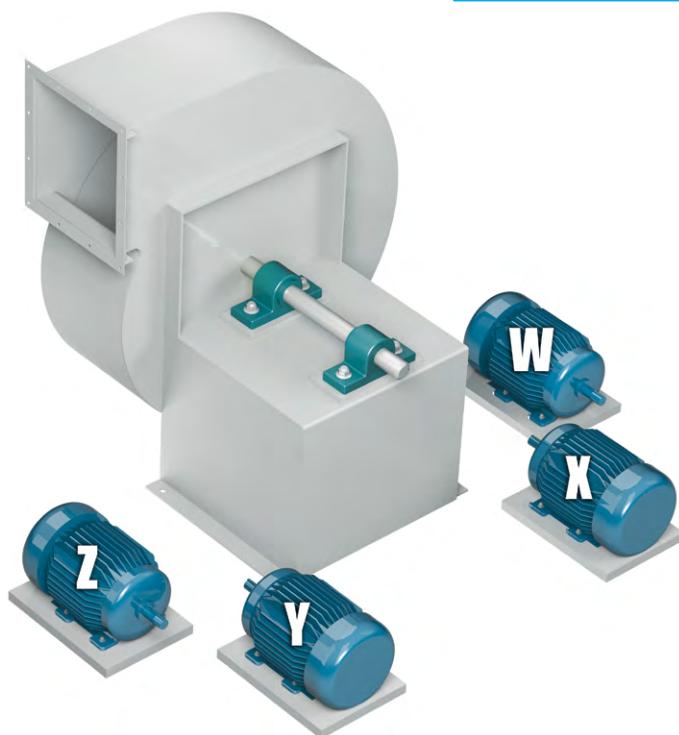

### CLOCKWISE (CW) - ROTATION & DISCHARGE (ROTATION VIEW FROM DRIVE SIDE)

### COUNTER CLOCKWISE (CCW) - ROTATION & DISCHARGE (ROTATION VIEW FROM DRIVE SIDE)

### AMCA MOTOR POSITION STANDARDS

The drawing above illustrates the AMCA motor position standards for Arrangement 1 and 3 fans (Arrangement 1 shown). The location of the motor is determined by facing the drive side of the fan and designating the motor position by letters W, X, Y, or Z, in accordance with the diagram shown above.

Arrangement 9, SWSI, Rotatable  
Class I & II

## Notes:

1. Discharge angles are included on all discharges except 'TAD' and 'DBD.'
2. "CW" rotation is shown. "CCW" rotation is similar but opposite.
3. \* Shaft diameter is increased to 1.187 on Hi-Temp fans that require shaft coolers.
4. Standard Arr. 9 motor location is on the left for "CW" rotation units and on the right for "CCW" rotation. Dimension "FR" equals max. motor frame.

DIMENSIONS NOT TO BE USED FOR CONSTRUCTION. CERTIFIED DRAWINGS AVAILABLE UPON REQUEST.

## Arrangement 1 & 9, SWSI, Non-Rotatable Class I & II

**Notes:**

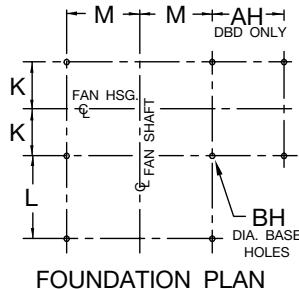

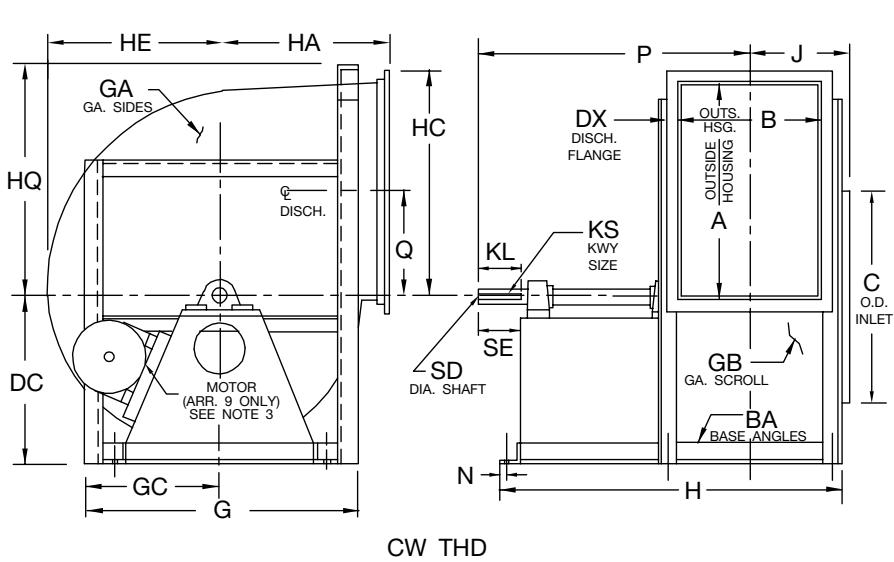

1. Discharge angles are included on all discharges.
2. "CW" rotation is shown. "CCW" rotation is similar but opposite.
3. Standard Arr. 9 motor location is on the left for "CW" rotation units and on the right for "CCW" rotation. Dimension "FR" equals max. motor frame.
4. For fans with inlet box at 90 degrees or 270 degrees, use "BAU" discharge dimension "DF" for centerline height.

DIMENSIONS NOT TO BE USED FOR CONSTRUCTION. CERTIFIED DRAWINGS AVAILABLE UPON REQUEST.

## Arrangement 1, SWSI, Non-Rotatable Class III (cont'd.)

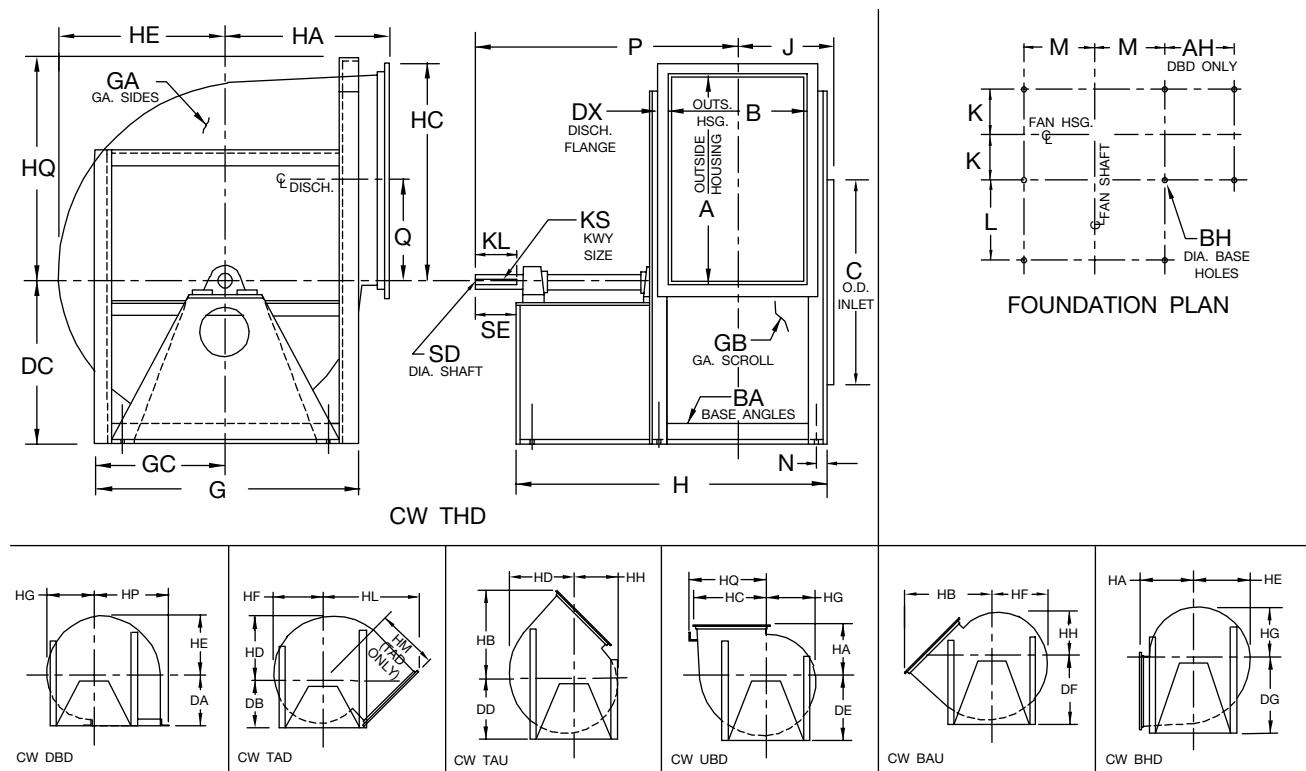

**Notes:**

1. Discharge angles are included on all discharges.
2. "CW" rotation is shown. "CCW" rotation is similar but opposite.
3. For fans with inlet box at 90 degrees or 270 degrees, use "BAU" discharge dimension "DF" for centerline height.

AC14967D

DIMENSIONS NOT TO BE USED FOR CONSTRUCTION. CERTIFIED DRAWINGS AVAILABLE UPON REQUEST.

## Arrangement 3, DWDI, Non-Rotatable Class I & II

**Notes:**

1. Inlet bearing bar supports are removable.
2. "CW" rotation is shown. "CCW" rotation is similar but opposite.
3. For optional flanged outlet connection and downblast discharge see Dwg. AC14896.
4. Bearing bar supports may extend beyond base angles. See Dwg. AC1000648 for dimensions if space limitations are required for mounting fan.

DIMENSIONS NOT TO BE USED FOR CONSTRUCTION. CERTIFIED DRAWINGS AVAILABLE UPON REQUEST.

# TYPICAL SPECIFICATIONS

**Model**

**BC-SW**

**PERFORMANCE** — Performance ratings shall conform to AMCA Standard 205 (fan efficiency grade), 211 (air performance) and 311 (sound performance). Fans shall be tested in accordance with ANSI/AMCA Standard 210 (air performance) and 300 (sound performance) in an AMCA accredited laboratory. Fans shall be licensed to bear the AMCA certified ratings seal for both sound and air, and fan efficiency grade (FEG).

Fans shall have a sharply rising pressure characteristic extending through the operating range and continuing to rise beyond the peak efficiency to ensure quiet and stable operation. Fans shall have a non-overloading design with self-limiting horsepower characteristics and shall reach a peak in the normal selection area. All fans shall be capable of operating over the minimum pressure class limits as specified in AMCA Standard 99.

**HOUSING** — BC fan housings shall be of heavy gauge, continuously welded construction. Housings with lock seams or partially welded construction are not acceptable. Discharge flanges are to be provided for rigidity and duct connection. Housings shall be suitably braced to prevent vibration or pulsation. Housings shall have tapered spun, aerodynamically designed inlet cones or funnels providing stable flow and high rigidity.

Class I and II sizes 270 and smaller shall be of the rotatable design, convertible to 8 standard discharge configurations.

**WHEEL** — BC backward inclined wheels shall be single thickness plate type, designed for maximum efficiency and quiet operation, and shall be solid welded to the rim and back plate. Partial welding will not be acceptable on airfoil or backward inclined blades. All wheels shall be statically and dynamically balanced.

**SHAFT** — Shafts shall be AISI 1040 or 1045 hot rolled steel, accurately turned, ground, polished, and ring gauged for accuracy. Shafts shall be sized for the first critical speed of at least 1.43 times the maximum speed.

**BEARINGS** — Bearings shall be heavy duty, grease lubricated, spherical roller or adapter mounted anti-friction ball, self-aligning, pillow block type and selected for a minimum average bearing life (AFBMA L-50) in excess of 200,000 hours at the maximum fan RPM.

**DRIVE** — Motor sheaves shall be cast iron, variable pitch on applications 10 HP and smaller, and fixed pitch on 15 HP and larger. Drives and belts shall be located external to the fan casing and rated for 150% of the required motor HP.

**FINISH AND COATING** — The entire fan assembly, excluding the shaft, shall be thoroughly degreased and deburred before application of a rust-preventative primer. After the fan is completely assembled, a finish coat of paint shall be applied to the entire assembly. The fan shaft shall be coated with a petroleum-based rust protectant.

**ACCESSORIES** — When specified, accessories such as belt guards, weather covers, access doors, companion flanges, variable inlet vanes, outlet dampers, piezometer ring airflow measurement device, inlet boxes, shaft coolers, shaft seals, inlet screens, etc., shall be provided by Twin City Fan & Blower to maintain one source responsibility.

When specified, fans shall be supplied with internal or nested type variable inlet vanes for wheel diameters 16½" and larger. Cantilevered vane blades are to be used through Size 660 to minimize air performance insertion losses and noise. The operating mechanism shall be out of the inlet airstream.

**FACTORY BALANCE AND RUN TESTING** — All fan wheels shall be statically and dynamically balanced in accordance with ANSI/AMCA 204 "Balance Quality and Vibration Levels for Fans" to Fan Application Category BV-3. This corresponds to a Balance Quality Grade G6.3. All assembled fans are test run at the rated operating speed or at the maximum RPM of the fan. Vibration readings are recorded in the horizontal, vertical and axial directions on both bearings. Trim balancing is performed if necessary to maintain BV-3 vibration limits. Records shall be maintained and a written copy shall be available upon request.

**GUARANTEE** — The manufacturer shall guarantee the workmanship and materials for its BC Backward Inclined fans for at least one (1) year from startup or eighteen (18) months from shipment, whichever occurs first.

## Model

**BC-DW**

**PERFORMANCE** — Performance ratings shall conform to AMCA Standard 205 (fan efficiency grade), 211 (air performance) and 311 (sound performance). Fans shall be tested in accordance with ANSI/AMCA Standard 210 (air performance) and 300 (sound performance) in an AMCA accredited laboratory. Fans shall be licensed to bear the AMCA certified ratings seal for both sound and air, and fan efficiency grade (FEG).

Fans shall have a sharply rising pressure characteristic extending through the operating range and continuing to rise beyond the peak efficiency to ensure quiet and stable operation. Fans shall have a non-overloading design with self-limiting horsepower characteristics and shall reach a peak in the normal selection area. All fans shall be capable of operating over the minimum pressure class limits as specified in AMCA Standard 99.

**HOUSING** — BC fan housings shall be of heavy gauge, continuously welded construction. Housings with lock seams or partially welded construction are not acceptable. Housings shall be suitably braced to prevent vibration or pulsation. Housings shall have spun, aerodynamically designed inlet cones or inlet venturies for smooth airflow into the wheels.

**WHEEL** — Wheels shall have tapered spun wheel cones or shrouds, providing stable flow and high rigidity. Wheels shall be of the non-overloading type. BC backward inclined wheels shall be single thickness plate type, continuously welded to the rim and back plate. Blades shall be designed for maximum efficiency and quiet operation. Partial welding will not be acceptable on airfoil or backward inclined blades. Smaller sizes may use extruded aluminum blades. All wheels shall be statically and dynamically balanced. The complete fan assembly shall be test balanced at the operating speed prior to shipment.

**SHAFT** — Shafts shall be AISI 1040 or 1045 hot rolled steel, accurately turned, ground, polished, and ring gauged for accuracy. Shafts shall be sized for the first critical speed of at least 1.43 times the maximum speed.

**BEARINGS** — Bearings shall be heavy duty, grease lubricated, spherical roller or adapter mounted anti-friction ball, self-aligning, pillow block type and selected for a minimum average bearing life (AFBMA L-50) in excess of 200,000 hours at the maximum fan RPM.

**DRIVE** — Motor sheaves shall be cast iron, variable pitch on applications 10 HP and smaller, and fixed pitch on 15 HP and larger. Drives and belts shall be located external to the fan casing and rated for 150% of the required motor HP.

**FINISH AND COATING** — The entire fan assembly, excluding the shaft, shall be thoroughly degreased and deburred before application of a rust-preventative primer. After the fan is completely assembled, a finish coat of paint shall be applied to the entire assembly. The fan shaft shall be coated with a petroleum-based rust protectant.

**ACCESSORIES** — When specified, accessories such as belt guards, access doors, companion flanges, variable inlet vanes, outlet dampers, piezometer ring airflow measurement device, inlet boxes, shaft coolers, shaft seals, inlet screens, etc., shall be provided by Twin City Fan & Blower to maintain one source responsibility.

When specified, fans shall be supplied with internal or nested type variable inlet vanes for wheel diameters 16½" and larger. Cantilevered vane blades are to be used through Size 660 to minimize air performance insertion losses and noise. The operating mechanism shall be out of the inlet airstream. Double width fans shall have interconnecting linkage to ensure operation in unison.

**FACTORY BALANCE AND RUN TESTING** — All fan wheels shall be statically and dynamically balanced in accordance with ANSI/AMCA 204 "Balance Quality and Vibration Levels for Fans" to Fan Application Category BV-3. This corresponds to a Balance Quality Grade G6.3. All assembled fans are test run at the rated operating speed or at the maximum RPM of the fan. Vibration readings are recorded in the horizontal, vertical and axial directions on both bearings. Trim balancing is performed if necessary to maintain BV-3 vibration limits. Records shall be maintained and a written copy shall be available upon request.

**GUARANTEE** — The manufacturer shall guarantee the workmanship and materials for its BC Backward Inclined fans for at least one (1) year from startup or eighteen (18) months from shipment, whichever occurs first.
